College Roll no :- 23014

ARCADE BUSINESS COLLEGE

Department of Bachelor of computer application

(Session: 2023-2026)

ACKNOWLEDGMENT

I would like to express my special thanks of gratitude to MR.ANISH SINGH, H.O.D of Bachelor of Computer Application who gave me the golden opportunity to do this wonderful synopsis report on 'Bank management system'.

I am also grateful to my friends and family who directly or indirectly involved with the project for their consecutive help and continuous suggestion on matter of the synopsis. I came to know about so many new things I am really thankful to them.

I am deeply inherited who devoted their precious time in giving me the information about the various aspect and gave support and guidance at every point of time.

Lastly, I would like to express gratitude to our respected Director MR. ASHISH ADARSH for his continuous support and resources.

Date of submission :-…… By- LAVKUSH KUMAR SINGH

DECLARATION

I hereby declare that the project work entitled "Bank management system" submitted to the ARCADE BUSINESS COLLEGE, Patna in the academic year 2023- 2026 is an original work done under the guidance of MR. ANISH SINGH, mentor and supervisor of this project.

Thus, this project is genuine and work by the student of this college and have not been submitted to any other university, college, and institute for the award of any degree or diploma.

Date-……. Submitted by- LAVKUSH KUMAR SINGH

9. Conclusion

INTRODUCTION

The "Bank Account Management System" project is a model Internet Banking Site. This site enables the customers to perform the basic banking transactions by sitting at their office

or at homes through PC or laptop. The system provides the access to the customer to create an account, deposit/withdraw the cash from his account, also to view reports of all accounts

present. The customers can access the banks website for viewing their Account details and perform the transactions on account as per their requirements. With Internet Banking, the

brick and mortar structure of the traditional banking gets converted into a click and portal model, thereby giving a concept of virtual banking a real shape. Thus today's banking is no longer confined to branches. E-banking facilitates banking transactions by customers round the clock globally. The primary aim of this "Bank Account Management System" is to provide an improved design methodology, which envisages the future expansion ..

and modification, which is necessary for a core sector like banking. This necessitates the design to be expandable and so a modular approach is used in developing the application software.

Anybody who is an Account holder in this bank can become a member of Bank Account System. He/she has to fill a form with his personal details and Account Number.

Bank is the place where customers feel the sense of safety for their property. In the bank, customers deposit and withdraw their money. Transaction of money also is a part where

customer takes shelter of the bank. Now to keep the belief and trust of customers, there is the positive need for management of the bank, which can handle all this with comfort and ease.

Smooth and efficient management affects the satisfaction of the customers and staff members, indirectly. And of course, it encourages management committee in taking some needed decision for future enhancement of the bank. The software has been developed using the most powerful and secure backend MYSQL data base and visual basic 6.0.

Abstract of the project

As we are beginners and have no practical experience in the field of software development and More over the Banking System is very wide. So, we limit the scope of our project by computerizing the

following fields of the Banking System :-

- Account number
- Customer name
- Amount deposit/withdrawals

Project category

The project has been developing in visual basic and oracle 10 G. Visual Basic 6.0 is both a programming language and an Integrated Development Environment (IDE). This means that instead of writing thousands of lines of code, we can create complicated programs by stringing together different forms and

components. The end result is a refreshingly simple, fun and easy to use approach to programming that's great for beginners as well as advanced coders. Visual Basic is a high level programming language evolved from the earlier DOS version called BASIC. It means Beginners' All purpose Symbolic Instruction Code. It is a fairly easy programming language to learn.

Visual Basic is a Visual and events driven Programming Language. In Visual Basic, programming is done in a graphical environment. Oracle 10g is a computing product group

belonging to Oracle's grid. Along with other tools and features, Oracle 10g provides an application server and a database management system (DBMS). It offers several supporting grid computing features of the likes of automatic load balancing, resource sharing, etc. Individuals and corporations use Oracle 10g to automate different types of database management tasks. Oracle 10 g uses the Real Application Cluster (RAC) tool for installing a database across multiple servers.

Oracle client 10g is a follower of the 9i platform hosted by Oracle. As per Oracle, the letter g in name of Oracle 10g signifies the Organization's commitment to its grid modular structure.

TOOLS/PLATFORMS, HARDWARE & SOFTWARE REQUIREMENTS

- Hardware requirements
  Processor: Intel(R) core TM 13-6006u CPU@
  RAM: 8 GB

  System: desktop NH29 DIK
- Software requirements
  Operating system: window 7,8.1,10,11
  System type: 64-bit operating system,X64 based processor

Data Modelling

1.Bank Master :-

Field	Type	Width	Attributes
Acc. No.	Numeric	(10,2)	Primary Key
Acc. Holder	Char	20	
Amount	Numeric	(10,2)	

2.Deposit :-

Field	Type	Width	Attributes
Acc. No.	Numeric	(10,2)	Primary Key
Acc. Holder	Char	20	
Amount	Numeric	(10,2)	

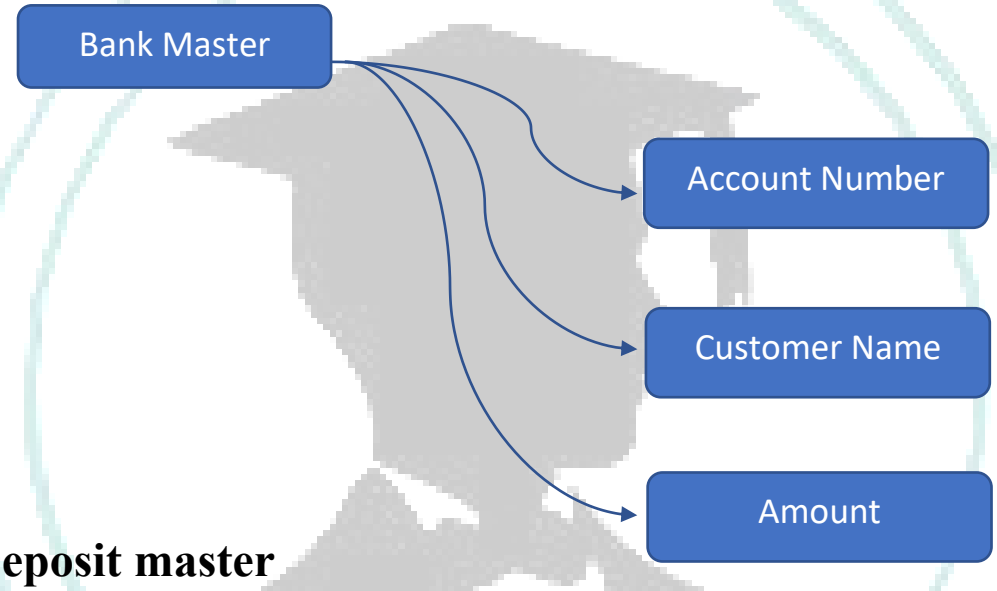
3.Withdraw :-

Field	Type	Width	Attributes
Acc. No.	Numeric	(10,2)	Primary Key
Acc. Holder	Char	20	
Amount	Numeric	(10,2)	

Process logic of each module

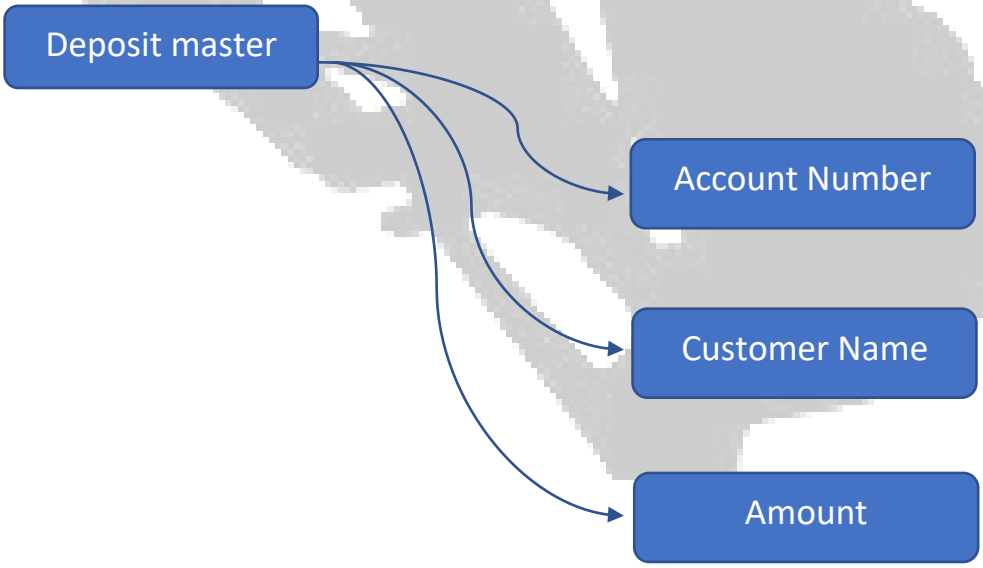
1.Bank master

Bank manager plays important roles in storing the information of account number, account name, and amount of the customer.in this particular module, we use the primary key as the customer number.



2.Deposit master

Deposit master is also an important module which stores the information amount of about account number, customer name, amount Is maintained. In this module we use the primary key as customer account number.



3.Withdraw master

With draw master is also an important module which stores the information amount of about account number, customer name, amount is maintained.in this module we use the primary key as customer account number.
